

Carbon Footprint Statement 2025

Environmental commitment

ICMA San Giorgio integrates environmental sustainability into its business strategy through its ISO 14001 environmental management system and continuous monitoring of environmental KPIs.

GHG methodology

Greenhouse gas emissions are calculated according to the GHG Protocol Corporate Standard covering Scope 1 and Scope 2 emissions. The inventory is periodically reviewed (every two years).

GHG emissions 2025

Scope 1 emissions: 139.3 tCO₂e

Scope 2 emissions (location based): 100.4 tCO₂e

Total emissions: 239.7 tCO₂e

Energy performance

Total energy consumption: 397 MWh

Renewable energy from photovoltaic systems contributes to reducing grid electricity consumption and related emissions.

Environmental actions

ICMA promotes:

- Energy efficiency improvements
- Monitoring of environmental indicators
- Emission reduction opportunities
- Development of recycling technologies
- Circular economy solutions

Continuous improvement

The company is committed to improving environmental performance through monitoring, internal reviews and sustainability-driven innovation.

Transparency

GHG emissions data are communicated internally and are available to customers and stakeholders upon request.
